# Anvolt Solar Power Generation

## Overview

---

The first factor in calculating solar panel output is the power rating. There are mainly 3 different classes of solar panels: 1. Small solar panels: 50W and 100W panels. 2. Standard solar panels: 200W, 250W, 300W, 350W.

If the sun would be shining at STC test conditions 24 hours per day, 300W panels would produce 300W output all the time (minus the system 25% losses). However, we all know that the sun doesn't shine during the night (0% solar).

Every electric system experiences losses. Solar panels are no exception. Being able to capture 100% of generated solar panel output would be perfect. However, realistically, every solar.
