

Solar Energy South Africa

Bolivia boundless energy

Overview

Under the Paris Climate Agreement, sustainable energy supply will largely be achieved through renewable energies. Each country will have its own unique optimal pathway to transition to a fully sustainable system.

ABEN – Bolivian Agency of Nuclear Energy (“Agencia Boliviana de

With plans to be the energetic heart of South America, Bolivia has ambitious plans to become a primary net exporter of energy to the region (MHE, 2017). Similarly, the government has.

This research utilized the LUT Energy System Transition model (Bogdanov et al., 2019a, 2019b; Ram et al., 2019) to study the Bolivian energy transition. Fig. 1 shows the process flow.

The results are presented here as follows: Section 3.1 discusses the major trends in the Bolivian energy system throughout the transition. The results for power, heat, transport, and de.

The discussion of results is separated into three parts. First, the major findings are discussed within the context of previous works (section 4.1). Second, section 4.2 outlines the limita.

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

What type of energy system does Bolivia use?

Similar to the country's total energy system, the power sector relies heavily on natural gas (AETN, 2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

Does Bolivia have a long-term energy plan?

As previously mentioned, the Bolivian government does not provide any long-term energy planning study, however, the UNFCCC (2015b) states that RE will compose 81% of electricity generation by 2030. Bolivia's scenario for 2027 according to MHE (2009) states that biomass sources will comprise 8% of total final energy demand.

Will Electric based heating drive the transition in Bolivia?

Heating demand in Bolivia transitions from a system dominated by natural gas and biomass to a largely electrified heating sector. Because of the low cost of renewable electricity, electric based heating will drive the transition for Bolivia's heat sector. Fig. 13.

How can Bolivia improve energy production?

Bolivia continues to make efforts to upgrade the infrastructure needed for renewable energy production. The National Interconnected System (SIN), which the government has put in place, aims to improve the nation's capacity for producing electricity by building additional power plants, transmission lines and substations.

What are the potential development scenarios for the Bolivian energy system?

This study presents a general overview of the Bolivian energy system and an array of potential development scenarios based on a mix of management and goal-based measures. In a BAU scenario the energy demands would double in each sector in a period of 20 years, between 2020 and 2040.
