The peaking potential of long-duration energy storage in the United ...

The overall potential of diurnal storage for peaking capacity in the current grid of about 130 GW is roughly 5 times the current capacity of diurnal storage in the United States (about 25 GW, largely in the form of pumped storage [4]). Storage technologies with durations of up to a 7-day capacity that have yet to be deployed at scale could add

Closed-Loop Pumped Storage Hydropower Resource ...

Pumped storage hydropower represents the bulk of the United States' current energy storage capacity: 23 gigawatts (GW) of the 24-GW national total (Denholm et al. 2021). This capacity was largely built between 1960 and 1990. PSH is a mature and proven method of energy storage with competitive round-trip efficiency and long life spans.
