Bouvet Island renew able

Overview

Bouvet Island is an uninhabited volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island. Located north of the Antarctic Peninsula, Bouvet Island is not part of the southern region covered by the Antarctic Peninsula.

Where is Bouvet Island?

Bouvet Island (/ 'bu:veɪ / BOO-vay; Norwegian: Bouvetøya [bʊ'vè:œyɑ]) is an uninhabited subantarctic volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island.

How did Bouvet Island become a dependency?

The expedition carried out aerial photography of the island and was the first Antarctic expedition to use aircraft. :64 The Dependency Act, passed by the Parliament of Norway on 27 February 1930, established Bouvet Island as a Norwegian dependency, along with Peter I Island and Queen Maud Land.

What country code is Bouvet Island?

Bouvet Island has been designated with the ISO 3166-2 code BV and was subsequently awarded the country code top-level domain .bv on 21 August 1997. The domain is managed by Norid but is not in use. The exclusive economic zone surrounding the island covers an area of 441,163 km² (170,334 sq mi).

How far is Bouvet Island from Antarctica?

Bouvet Island is one of the most remote islands in the world. The closest land is Queen Maud Land of Antarctica, which is 1,700 km (1,100 mi) to the south, : 58 and Gough Island, 1,845 km (1,146 mi) to the north.

How did Bouvet Island get its name?

At that point, the island was given its current name of Bouvet Island ("Bouvetøya" in Norwegian). In 1930, following resolution of a dispute with

the United Kingdom over claiming rights, it was declared a Norwegian dependency. In 1971, it was designated a nature reserve.

How big is Bouvet Island?

Landing is extremely difficult on the island. It has an area of 23 square miles (59 square km), rises to 3,068 feet (935 metres), and is uninhabited. Bouvet Island was discovered in 1739 by the French navigator Jean-Baptiste-Charles Bouvet de Lozier (1705–86), for whom it is named.

No claim was made until 1825, when the British flag was raised. In 1928, the UK waived its claim in favor of Norway, which had occupied the island the previous year. In 1971, Bouvet Island and the adjacent territorial waters were

designated a nature reserve. Since 1977, Norway has run an automated meteorological station on the island.

[Detailed Satellite Map of Bouvet Island](#)

This map of Bouvet Island is provided by Google Maps, whose primary purpose is to provide local street maps rather than a planetary view of the Earth. Within the context of local street searches, angles and compass directions are very important, as well as ensuring that distances in all directions are shown at the same scale.

Bouvet Island , Map, History, & Facts , Britannica

Bouvet Island, islet in the South Atlantic Ocean. One of the world's most isolated islands, it lies about 1,500 miles (2,400 km) southwest of the Cape of Good Hope of southern Africa and about 1,000 miles (1,600 km) north of the mainland of ...

The island at the end of the world: Bouvetøya

Bouvet Island (called Bouvetøya in norwegian) is 49 square kilometer in area. About a quarter of this is taken up by a caldera, called Wilhelmsplataet. The highest point of the island is on the caldera rim, Olavtoppen, at 780 meter; it was climbed for the first time only in 2012. The

ice-filled caldera itself is 250 meter below the rim.

[A Thousand Miles from Nowhere](#)

Bouvet Island is known as the most remote island in the world; Antarctica, over 1600 kilometers (994 miles) to the south, is the nearest land mass. Located near the junction between the South American, African, and Antarctic tectonic plates, the island is mostly formed from a shield volcano--a broad, gently sloping cone formed by thin, fluid
