Sistemul solar: energie și căldură de la soare , Viessmann RO

Un sistem solar termic de la Viessmann utilizează radiația gratuită a soarelui pentru a genera căldură pentru apă caldă și încălzire. Acest lucru necesită utilizarea de colectoare solare, un boiler solar și o rețea de conducte care conectează toate componentele între ele.

Colectoare solare

Colectoarele solare formează nucleul unui sistem solar termic. După cum sugerează și numele lor, acestea colectează razele soarelui. Aceasta este apoi urmată de transformarea în căldură utilizabilă, care poate fi apoi folosită pentru a încălzi apa caldă menajeră sau ca încălzire

centrala de rezerva în casa.
