## Building energy institutions in a conflict zone: Interventions by

Here we examine selected, energy-related aspects of those institution-building processes, taking the country as a case study of institutional development for energy and other transitions that is explicitly driven by particular values. We use the transition topology approach to map energy-related institutional development over two decades.

## Co-optimization of building energy systems with renewable ...

The BES refers to all energy-using systems in buildings. In this study, we limit the definition of BES to active and passive energy-saving systems. In active energy-saving systems, it can be driven by economic and carbon metrics, which couple electricity, gas, heat, cooling, and other energy sources in a single building [4], [5].

## Energy Efficiency in Sustainable Buildings: A

Sustainable buildings have become a key issue for many developing and developed countries in the twenty-first century. The global population is expected to rise from 7.7 billion in 2019 to 9.7 billion in 2050 and will reach more than 10.9 billion by the end of this century [1]. This increase in the global inhabitants will correspondingly increase the demand for water, ...
