Can the locker be placed outside the door

Overview

What are the OSHA requirements for metal storage lockers & cabinets?

OSHA has also developed material requirements for metal storage lockers and cabinets. Moreover, OSHA requires the “bottom, top, door, and sides of the (storage) cabinet shall be at least No. 18 gauge sheet steel and shall be double-walled.”.

Where should safety cabinets be placed?

Safety cabinets also should not be placed under stairways. A good rule of thumb is to place flammable safety cabinets in areas that are least likely to affect emergency evacuations. It's tempting to keep your safety cabinets on pallets since that's most likely how they'll arrive at your facility.

Where should storage cabinets be placed?

They must be placed at a location that meets the local fire code requirements, such as Part 2 in the National Fire Code of Canada, and as instructed by the manufacturer. Storage safety cabinets can be placed under a counter, along a wall, or be wall-mounted or stacked. Select a location that does not block exits, walkways, evacuation routes, etc.

Can a cabinet near an exit door be obstructed?

Because this cabinet you saw is located near an exit door, let's first look at OSHA's general requirements for exit routes, emergency action plans and fire prevention plans [20 CFR 1910.37-39]. Fire exit routes cannot be obstructed [29 CFR 1910.37 (a) (3)] and they cannot become more narrow at any point.

Do flammable cabinets need self-closing doors?

If you're located in a state that has adopted either of the following standards, then your flammable cabinets must have self-closing doors. Even if your state does not require cabinets with self-closing doors, they do help stop the spread of fire by ensuring that doors are not unintentionally left open after the

cabinet has been accessed.

Are chemical storage lockers fire rated?

Our fire-rated chemical storage lockers meet all stringent OSHA and NFPA 30 flammable storage requirements. Optional mechanical ventilation prevents the volatile accumulation of toxic vapors that cause flashover events. Furthermore, we can equip larger chemical payloads with superior fire suppression protection.
