China Southern Power Grid WeChat Smart Power Consumption

Overview

How many kilowatt-hours does China Southern power grid use?

China Southern Power Grid said the five regions that it covers have consumed 540 billion kilowatt-hours of clean energy during the first nine months, with the renewable energy generation efficiency reaching 99.81 percent, up 0.22 percent year-on-year. Newly added installation of new energy reached 3.31 million kW.

Will a digital power grid help China achieve a carbon peak?

A digital power grid will better facilitate the consumption of power increasingly produced by clean energy while further facilitating China's ambition to achieve a carbon peak by 2030 and carbon neutrality by 2060, he said.

Does China's Southern Power Grid have a digital power network?

"China Southern Power Grid also has two major pilot projects on power trading in Guangdong and Yunnan provinces, which provide both challenges and opportunities for the country's in-depth digitalization of its power networks," he added.

How much will China Southern power grid invest?

[Photo/Xinhua] China Southern Power Grid, one of the country's two major power grids, vowed to invest 670 billion yuan (\$105 billion) recently in grid network construction during the 14th Five-Year Plan period (2021-25) to ensure power supply stability and boost green power consumption.

Does China have a digital power grid?

[Photo provided to China Daily] China Southern Power Grid has pledged to continue investing in digital power grid construction, including a digital grid across Guangdong, Yunnan, Guizhou and Hainan provinces and the Guangxi Zhuang autonomous region.

What's behind China's record-breaking electricity consumption?

A heatwave and brisk economic activities have combined to set off record-breaking electricity consumption in southern Chinese provinces, prompting the state-owned power grid operator to ration power to factories and commercial services providers.
