## Overview

---

Does new pumped-storage capacity in China improve wind and solar power?

38 U.S. Energy Information Administration, International Energy Statistics. 39 Katherine Antonio, Jonathan Russo, and Elesia Fasching, "New pumped-storage capacity in China is helping to integrate growing wind and solar power," U.S. Energy Information Administration, August 9, 2023.

Why is China a leader in green energy?

China now leads the world in many energy spaces. China refines approximately 90% of the world's critical minerals used in green energy, exports a quarter of the world's EVs, electric vehicles, and has more solar panels for use and export than the rest of the world combined.

Will pumped-storage capacity boost China's plans to go green?

39 Katherine Antonio, Jonathan Russo, and Elesia Fasching, "New pumped-storage capacity in China is helping to integrate growing wind and solar power," U.S. Energy Information Administration, August 9, 2023. 40 Ameya Paleja, "Hydro energy storage gets a major boost in China's plans to go green," Interesting Engineering, June 20, 2022.

What services does UPB offer?

UPB also offers cogeneration and trigeneration module servicing according to the highest standards. The cogeneration and trigeneration station production facility is located in Liepāja, Latvia and is the only production site of this type in the Baltics.

Why should you choose UPB?

The focus of UPB is economic operation of the power equipment and the fuel required for production of power is used especially efficiently providing additional benefits to the customers. UPB also offers cogeneration and trigeneration module servicing according to the highest standards.

How did China's electricity generation grow in 2022?

China's electricity generation growth slowed to 3% in 2022. Fossil fuels accounted for 64% of all generation, 2% less than in 2021. Coal, which accounted for the largest share of all generation (61%), and petroleum-fired generation both increased slightly from 2021.
