Classification of Microgrids

Overview

How are microgrids categorized?

Microgrids can be categorized via different aspects ranging from the structure such as DC, AC, or hybrid to control scheme such as centralized, decentralized or distributed. This chapter reviews briefly the microgrid concept, its working definitions and classifications.

What is the nature of microgrid?

The nature of microgrid is random and intermittent compared to regular grid. Different microgrid structures with their comparative analyses are illustrated here. Different control schemes, basic control schemes like the centralized, decentralized, and distributed control, and multilevel control schemes like the hierarchal control are discussed.

What are the components of microgrid control?

The microgrid control consists of: (a) micro source and load controllers, (b) microgrid system central controller, and (c) distribution management system. The function of microgrid control is of three sections: (a) the upstream network interface, (b) microgrid control, and (c) protection, local control.

What is a microgrid control system?

Microgrid consists of several fragmented renewable resources and varied weather conditions that bring in the key challenge of ensuring stable operation of the system. The control system needs to be designed keeping in focus some of the major issues and the prime research areas are discussed in the following section. 1.

What are the studies run on microgrid?

The studies run on microgrid are classified in the two topics of feasibility and economic studies and control and optimization. The applications and types of microgrid are introduced first, and next, the objective of microgrid control is

explained. Microgrid control is of the coordinated control and local control categories.

What is the layered structure of a microgrid?

The layered structure of the microgrid is explained followed by brief explanation of modes of operation, control, and hierarchical control scheme of the each microgrid. The concept and modeling of PV, MPPT algorithms, wind turbine system, batteries, and FC is also discussed.
