Congo Republic hygea energy

Overview

The Democratic Republic of the Congo has reserves of , , , and a potential power generating capacity of around 100,000 MW. The on the has the potential capacity to generate 40,000 to 45,000 MW of electric power, sufficient to supply the electricity needs of the whole Southern Africa region. Ongoing uncertainties in the political arena, and a resulting lack of interest from investors has meant that the Inga Dam's potential ha.

How much power does the Democratic Republic of the Congo have?

The Democratic Republic of the Congo has reserves of petroleum, natural gas, coal, and a potential hydroelectric power generating capacity of around 100,000 MW. The Inga Dam on the Congo River has the potential capacity to generate 40,000 to 45,000 MW of electric power, sufficient to supply the electricity needs of the whole Southern Africa region.

Is the Democratic Republic of the Congo an energy exporter?

One of the Inga dams, a major source of hydroelectricity in the Democratic Republic of the Congo. The Democratic Republic of the Congo was a net energy exporter in 2008. Most energy was consumed domestically in 2008. According to the IEA statistics the energy export was in 2008 small and less than from the Republic of Congo.

How much electricity does the DR Congo import?

The DR Congo imported 78 million kWh of electricity in 2007. The DR Congo is also an exporter of electric power. In 2003, electric power exports came to 1.3 TWh, with power transmitted to the Republic of Congo and its capital, Brazzaville, as well as to Zambia and South Africa.

How does the Democratic Republic of the Congo support the economy?

In the AC, Democratic Republic of the Congo supports an economy six-times larger than today's with only 35% more energy by diversifying its energy mix away from one that is 95% dependent on bioenergy.

What is the energy potential of the Congo River?

The Congo River, which is the second largest river in the world with its basin astride the Equator provides an energy potential estimated at 100,000 MW spread across 780 sites in 145 territories and 76 000 villages. This potential represents approximately 37% of the African overall potential and about 6% of the global potential.

How much energy will the Congo River provide in 2030?

The government's vision is to increase the level of service up to 32% in 2030. The Congo River, which is the second largest river in the world with its basin astride the Equator provides an energy potential estimated at 100,000 MW spread across 780 sites in 145 territories and 76 000 villages.

Republic of Congo

The Republic of Congo's energy sector is ripe for investment. The absence of reliable power grids and adequate electrical distribution has a dampening effect on investment and development, as potential investors typically have to provide their own power generation to operate effectively.
