Congo Republic iskus power

Overview

How much energy does the Republic of Congo need?

The Republic of Congo's energy supply is highly dependent on gas (350 MW), hydropower (209 MW), and diesel (41 MW). The country aims to increase its power generation capacity to meet demand, and recently invested in the 120 MW Imboulou hydropower plant, a 30 MW thermal power plant, as well as two 300 MW turbine gas power plants.

How much power does the Democratic Republic of the Congo have?

The Democratic Republic of the Congo has reserves of petroleum, natural gas, coal, and a potential hydroelectric power generating capacity of around 100,000 MW. The Inga Dam on the Congo River has the potential capacity to generate 40,000 to 45,000 MW of electric power, sufficient to supply the electricity needs of the whole Southern Africa region.

Is the Democratic Republic of the Congo an energy exporter?

One of the Inga dams, a major source of hydroelectricity in the Democratic Republic of the Congo. The Democratic Republic of the Congo was a net energy exporter in 2008. Most energy was consumed domestically in 2008. According to the IEA statistics the energy export was in 2008 small and less than from the Republic of Congo.

How much electricity does the DR Congo import?

The DR Congo imported 78 million kWh of electricity in 2007. The DR Congo is also an exporter of electric power. In 2003, electric power exports came to 1.3 TWh, with power transmitted to the Republic of Congo and its capital, Brazzaville, as well as to Zambia and South Africa.

What is the Congo Energy Atlas?

This Atlas was created by the UNDP, Netherlands Development Organization SNV, and the Congolese Ministry of Water Resources and Electricity. It has 600

interactive maps and informs policymaking on decentralizing energy and encourages further renewable energy investments.

Does the Republic of the Congo have hydropower?

The Republic of the Congo also has extensive hydropower potential, but most of it remains untapped. The share of renewable energy in the total final energy consumption (TFEC) has been on the decline after a small spike to 72.7 per cent in 2000 before falling to just under 50 per cent in 2012.
