

## Solar Energy South Africa

# Disassembly of air-cooled energy storage battery cabinet

## Overview

---

What is a battery energy storage system?

Among ESS of various types, a battery energy storage system (BESS) stores the energy in an electrochemical form within the battery cells. The characteristics of rapid response and size-scaling flexibility enable a BESS to fulfill diverse applications .

Can a battery energy-storage system improve airflow distribution?

Increased air residence time improves the uniformity of air distribution. Inspired by the ventilation system of data centers, we demonstrated a solution to improve the airflow distribution of a battery energy-storage system (BESS) that can significantly expedite the design and optimization iteration compared to the existing process.

Why do batteries need a cooling system?

The cooling limitation of local battery cells also increases the risk of excessive temperature for the batteries. Thermal management and cooling solutions for batteries are widely discussed topics with the evolution to a more compact and increased-density battery configuration.

What is the temperature distribution of a battery cabinet?

The results show a great difference in temperature at various heights of the battery cabinet. The batteries of the lower height level have a temperature about 25°C; the batteries of the higher height level have a temperature near 55°C. There are also differences in the temperature distribution for various battery cabinets.

Why is thermal management important for energy storage batteries?

For energy storage batteries, thermal management plays an important role in effectively intervening in the safety evolution and reducing the risk of thermal runaway. Because of simple structure, low cost, and high reliability, air cooling

is the preferred solution for the thermal management.

What does a smaller number mean in a battery cabinet?

The labels with a smaller number represent the lower height level of the batteries in the cabinet; the naming of the cabinet is specified in Fig. 3. The results show a great difference in temperature at various heights of the battery cabinet.
