

## Solar Energy South Africa

# Energy management company Greenland

## Overview

---

How is electricity produced in Greenland?

Most of the electricity is produced by hydro power such as the Qorlortorsuaq Dam. 70% of Greenland's energy is produced by renewable sources. The rest is produced by oil burned plants. The company employs 400 people, spread on 17 cities and 54 villages. There is a lot of potential yet unbuilt hydro power.

What is the primary energy mix of Greenland?

As presented in Fig. 2, the primary energy mix of Greenland changes notably between 2019 and 2050. In the reference scenario, oil constitutes around 80% of the primary energy consumption, with the rest being supplied mainly by hydropower.

Is Greenland a good place for offshore wind power?

However, a study on wind and wave power potential on 22 islands has found Greenland to be one of the best sites for offshore wind power with 4555–5450 full load hours (FLH) in addition to good conditions for wave power with 1050–4000 FLH. Satymov et al. found 5000–6000 FLH in the south of Greenland for an improved wave energy converter.

Does Greenland have a decentralised energy system?

No comprehensive study on Greenland has been found, as existing studies focus on small individual communities. Such studies provide a tailored perspective on decentralised energy systems, considering local climate conditions, energy demand, and quality of local renewable resources.

How does Greenland grow its economy?

Greenland expects to grow its economy based on increased income from the extraction of natural resources. The capital, Nuuk, held the 2016 Arctic Winter Games. Greenland leads the world in renewable energy. 70% of its energy is from renewable sources, particularly hydropower.

Where is Greenland located?

Greenland is an autonomous constituent country of the Kingdom of Denmark between the Arctic and Atlantic Oceans, east of the Canadian Arctic Archipelago.
