

Solar Energy South Africa

Etheras energy Russia

Overview

What is Russia's energy strategy?

Russia's energy strategy prioritizes self-sufficiency in gasoline, so it tends to export minimal volumes. However, Russian refiners produced roughly double the diesel needed to satisfy domestic demand, and typically exported half their annual production, much of it to European markets.

What is Russia's solar energy potential?

It has been estimated that Russia's gross potential for solar energy is 2.3 trillion tce. The regions with the best solar radiation potential are the North Caucasus, the Black Sea and the Caspian Sea areas, and southern parts of Siberia and the Far East.

Is Russian hydro resource base economically feasible?

Gross theoretical potential of the Russian hydro resource base is 2,295 TWh per year, of which 852 TWh is regarded as economically feasible. Most of this potential is located in Siberia and the Far East.

How much oil does Russia produce a day?

In 2021, Russian crude and condensate output reached 10.5 million barrels per day (barrels per day), making up 14% of the world's total supply. Russia has oil and gas production facilities throughout the country, but the bulk of its fields are concentrated in western and eastern Siberia.

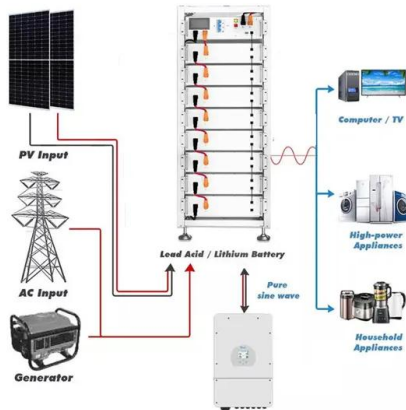

Which oil company produces the most oil in Russia?

Rosneft, which is state-owned, is the largest oil producer in Russia. It is followed by Lukoil, which is the largest privately owned oil company in the country. Gazprom Neft, Surgutneftegaz, Tatneft and Russneft also have significant production and refining assets.

How many hydropower plants are there in Russia?

Hydropower accounts for about 20% of Russia's total electric power production. The country has 102 hydropower plants in operation, with RusHydro the world's second-largest hydroelectric power producer. Hydro generation (including pumped-storage output) in 2020 was 196 TWh, which represents 4.4% of world hydro electricity generation.
