

Solar Energy South Africa

Extron energy Syria

Overview

in is mostly based on and . Some energy infrastructure was damaged by the . There is high reliance on for energy in Syria, and electricity demand is projected to increase by 2030, especially for industry activity such as . However, conflict in Syria has caused electricity generation to decrease by nearly 40% in recent years due to plant destruction and fuel shortages. Electricity access in daily life for Syrians has also been.

Why is Syria's energy sector in turmoil?

Syria's energy sector is in turmoil because of the ongoing civil conflict that began in the spring of 2011, with oil and natural gas production declining dramatically since then. Syria's energy sector has encountered a number of challenges as a result of conflict and subsequent sanctions imposed by the United States and the European Union.

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

Does Syria have electricity?

Syria also had separate entities for the generation and distribution of electricity. Syria's oil sector has been in a state of disarray since 2011. Production and exports of crude oil have fallen to nearly zero, and the country is facing supply shortages of refined products.

Can Syria resurrect its oil and gas production?

Resurrecting oil and gas production will not be easy. Before the war, Syria produced 383,000 barrels a day. Now, it produces less than 90,000, according to the World Bank. Facilities and pipelines, including those that deliver energy to Iraq, Jordan and Egypt, have been destroyed or damaged. The country has been importing more oil than it exports.

What happened to Syria's oil & natural gas industry?

Syria, previously the eastern Mediterranean's leading oil and natural gas producer, has seen its production fall to a fraction of pre-conflict levels. Syria is no longer able to export oil, and as a result, government revenues from the energy sector have fallen significantly.

What happened to Syria's electricity sector in 2021?

In 2021, Syria's Ministry of Electricity estimated total losses to the electricity sector at USD 2.4 billion due to infrastructural damage and acute shortages of fuel and water needed to power Syria's thermal and hydroelectric infrastructure.

XPA U 758

The Extron XPA U 758 is an ENERGY STAR qualified audio power amplifier delivering eight 75 watt channels in a half rack, 1U, convection cooled, plenum rated enclosure that includes rack mount hardware. The XPA U 758 offers unprecedented power and channel density with the ability to install units without using rack spaces for ventilation, conserving precious rack space.

AXI 016

The Extron AXI 016 is a half rack width, 16 output audio expansion interface for DMP Plus Series audio DSP systems. The AXI 016 connects to EXP expansion port of the DMP Plus Series, adding 16 outputs to the matrix. Since all of the high performance, low-latency DSP occurs within the attached DMP Plus model, no separate configuration is needed for the AXI 016.
