Overview

Can the Faroe Islands expand its wind turbine capacity?

A possible combination could be to stake on expanding the wind turbine capacity from 18.6 MW to 72 MW in 2030 and supplement with two production methods that are new to the Faroe Islands: gradual expansion of solar parks with a total capacity of 30 MW and a tide plant with a capacity of up to 60 MW.

What are the key innovations in energy planning for the Faroe Islands?

The key innovations of this paper for islands, and global energy transition planning, are: The central incorporation of social perspectives into the energy planning for the Faroe Islands via explicit elicitation of criteria weights of local stakeholders.

Can the Faroe Islands be a smart microgrid?

“The energy system in the Faroe Islands is an impressive example of how all available energy resources can be integrated into a smart and innovative microgrid,” says Vehkakoski.

Will the Faroe Islands use more green energy in 2025?

Even more conservative scenarios predict that the Faroe Islands’ current electricity consumption of approximately 350,000 MWh per year will increase to approximately 450,000 MWh in 2025. “The current discussion recommends using more green energy and especially the potential for wind energy is quite high,” says one of the islanders.

Can the Faroe Islands convert their energy system to renewable sources?

A number of researchers have studied the conversion of the Faroe Islands’ energy system to renewable sources. These studies looked at a single island or more broadly [51, 53] and their primary focus was on the techno-economic optimization of the new system.

What technical scenarios were developed for the Faroe Islands?

Different technical scenarios were developed for the Faroe Islands based on the goal of achieving 100% green electrical energy production by 2030 along with greater electrification of transport, industry and heating. This section describes the key characteristics of these scenarios and some of the main energy system-related assumptions.
