Fiji noretek energy

Overview

What is Fiji's energy situation?

Fiji's energy situation is characterised primarily by a high reliance on imported fuels. Therefore there is a need to act now to reduce the reliance on imported fossil fuels through renewable energy while increasing the efficiency of use of current fossil fuel supplies.

What is Fiji's national energy policy 2023-2030?

Fiji's National Energy Policy 2023-2030 is the blueprint towards a highly sustainable, inclusive, reliable, and affordable energy services sector by the close of the decade. It sets a strong policy foundation for the transformational investments that are urgently needed to revolutionise our energy sector for the better.

What is Fiji's energy policy?

This Policy will ensure that Fiji's agricultural sector and local industries can benefit from a further source of sustainable, indigenously-sourced energy while minimising any potential impacts on the environment or national food security.

Does Fiji have a good energy supply?

Like for many other SIDs Fiji's geographical situation means that affordable and accessible energy supply is a challenge. The Island state depends heavily on imported fossil fuel to meet its energy needs, nevertheless, renewable energy sources, mainly hydro, account for 55% of the country's total energy production.

What is Fiji's long-term energy security?

Fiji's long-term energy security is dependent on upholding safety standards, managing fuel costs, reducing dependency on imported fuels, improving contingency measures in the event of disruption, and minimising

vulnerabilities to climate and disaster risks within Fiji's energy systems and services.

How does Fiji generate electricity?

Today, as much as 60% of Fiji's electricity generation is derived from hydropower while remote islands and some rural areas are largely dependent on energy production powered by imported fossil fuels. The growth of Fiji's land transport sector has been largely concentrated around growing urban centres.
