.

How does a generator silencer reduce exhaust noise?

The exhaust noise is reduced as it flows through the insulation. This type of generator silencer has a greater sound attenuation rating and is typically used to reduce high frequency sound waves. As the name implies, this type of silencer combines the construction of the reactive and absorptive silencers.

Do generator exhaust silencers have a sound rating?

Typically, noise ratings increase along with the power and size of the generator. For generators, a silencer does the same job that a muffler handles for engines in automotive and construction applications. Diesel generator exhaust silencers also come with a sound rating and they are divided into various grades.

What is a diesel generator exhaust silencer?

A diesel generator exhaust silencer is a device for reducing diesel engine noise emission. It is inevitable that all internal combustion engines produce noise, more or less. The noise level will largely vary depending on diesel engine type.

Does a generator exhaust muffler reduce noise?

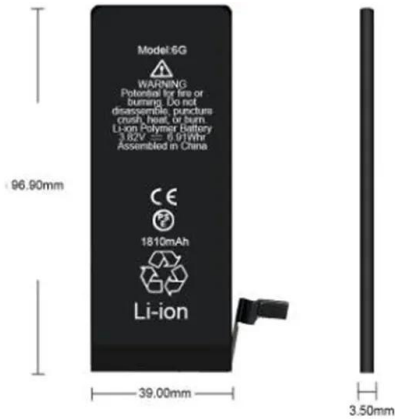

Some exhaust kits include silencers or mufflers designed to reduce noise

levels: Noise Reduction: Installing a generator exhaust silencer can significantly decrease the noise generated during operation.

What is the EGSA guide for rating generator exhaust silencers?

The EGSA Guide for Rating Generator Exhaust Silencers was developed to provide quantitative, consistent silencer ratings that can be used by EGSA members, specification writers, acoustical consultants and facilities engineers with confidence that they get the noise reduction expected from a silencer labeled with a particular grade.
