

## Solar Energy South Africa

# Generator solar for home Sierra Leone

## Overview

---

Why do Sierra Leoneans need solar power?

For the 97 percent of rural Sierra Leoneans who lack access to the grid, individual solar home systems and decentralized generators can provide crucial electric power for a multitude of purposes. In town centers, street lamps run on solar power, and solar radios help citizens communicate and learn about current events.

Can solar power boost economic growth in Sierra Leone?

Solar power has the potential to greatly increase energy access in Sierra Leone and accelerate its economic growth. Both internationally financed central power systems like Solar Park Freetown and private solar setups in rural areas will create jobs and provide a stable source of energy for millions.

Will Abu Dhabi help Sierra Leone build a new solar power plant?

The Abu Dhabi Fund for Development announced a new loan program that would provide Sierra Leone with Dh 33 million, or about \$8.9 million, to construct a new solar power plant near Freetown, the capital and a major urban area.

How many solar mini-grid sites are there in Sierra Leone?

In 2020 Power Leone signed an MOU with the Government of Sierra Leone to construct and operate 40 solar mini-grid sites with 1.4 MW capacity across rural Sierra Leone. In 2024, Sierra Leone is constructing and commissioning 17 of these mini-grid sites (800 kW).

Does Sierra Leone have a weak electricity grid?

Sierra Leone's grid only provides 13 megawatts per million people, about 3.5 times less than nations with similar socio-economic conditions. The weak electrical grid forces many citizens to purchase expensive oil and gas, and electric power remains scarce. New central solar power initiatives will help

solve this problem.

Will Solar Park Freetown bolster Sierra Leone's shaky central power supplies?

In addition to providing manufacturing jobs to people who need it, Solar Park Freetown will bolster Sierra Leone's shaky central power supplies. Much of Freetown's power comes from the Bumbuna Dam, which, according to a 2011 World Bank report, produces less than 20 megawatts of power during the dry season.
