Overview

How will the MACSE policy support mechanism work in 2025?

2025 is set to see the start of a surge in Italian storage asset investment, led by BESS. The catalyst for this is the implementation of the new MACSE policy support mechanism, offering 15 year indexed contracts on up to 100% of asset capacity.

Will MACSE competition be 'fierce'?

Consultancy Timera Energy recently said competition in the MACSE auction will be “fierce”, and suggested BESS operators maintain a merchant tranche of their project to offset potentially lower returns on the MACSE contracted tranche.

What is MACSE policy support?

The catalyst for this is the implementation of the new MACSE policy support mechanism, offering 15 year indexed contracts on up to 100% of asset capacity. MACSE is a game changer. 15 year contracts provide key downside risk protection for infrastructure investors.

How does MACSE work?

By furnishing clear, long-term pricing signals, MACSE seeks to attract investment into the storage systems market. Under MACSE, newly constructed storage facilities will receive compensation through long-term contracts, offering a premium in €/MWh-years. This premium will be determined via competitive auction processes.

How will MACSE tender targets affect Bess investors?

MACSE tender targets will adapt to the zonal need for storage, but market inefficiencies in predicting fundamental value drivers (e.g., RES buildout, lack of flexibility, interconnection constraints) will likely create locational merchant upside for BESS investors.

What will MACSE do in 2025?

Much larger projects are expected to come online in the next few years, driven by MACSE. Image: Trina Solar. Minister of the environment and energy security Gilberto Pichetto has signed a decree allowing Italy to proceed with its energy storage capacity auction, known as MACSE, in the first half of 2025.
