### Control and Stability of Microgrid During Grid to Island

...

**P-Q control** The P-Q control is used for grid control. The individual DGs are supposed to take care of proportional load sharing while the grid takes care of voltage and frequency. But during after islanding mode the controller has to take care of both P=Q and V-f controls. The controller scheme is shown Fig.2 below. Fig. 2:- Grid connected

## Island & Microgrids

Renewable energies are often connected via inverter-based systems. These have complex controller structures, making their behavior more accessible to system programming and less dependent on physical responses. As a result, much functionality can be implemented, but it needs to be tuned to the specific island or micro grid environment.
