## Difference in Solar Panel Sizes

These larger panels are about 40" x 80" and are frequently referred to as 72 cell solar panels. Most commercial 72 cell solar panels focus on value while sacrificing looks. To achieve a lower cost, the color of the 72 cell solar panels are typically blue while utilizing a silver frame. Historically, 72 solar cell panels have been used as

## 72 Cell Solar Panels

You need a higher voltage to charge a battery. For that reason, a 36 cell solar panel is called a 12V "nominal" panel, because it is designed to charge a 12V battery. Similarly, a solar panel with twice as many cells, 72 cells, outputs about 36 volts, and it is great for charging a 24V

battery bank. So it is called a 24V nominal solar panel.

## 60 Cell vs 72 Cell Solar Panels: What is the Difference?

72-cell solar panels are structures made up of 72 individual solar cells arranged, usually in a 6x12 grid. These panels are larger compared to the 60-cell solar panel and also generate more power. They are designed to achieve higher energy output and are mostly utilized in commercial and utility-scale solar projects.

## Pros and Cons of 60-cell & 72-cell Solar Modules , Couleenergy

You need at least 1 72-cell solar panel or 2 60-cell panels in series to have a voltage high enough to charge 24V. If you're in a cold environment, most 150V MPPT solar charge controllers limit you up to only 2 72-cell panels in series, but you can do up to 3 60-cell panels in series and still stay within that 150-volt limitation.

## Understanding 60-Cell and

## 72-Cell Solar Panels

When installing solar panels for a home, the most commonly used panel is the 60-cell panel, but there is no reason why you cannot choose 72-cell solar panels. Traditionally, 72-cell solar panels are used in commercial buildings, but there is a growing shift toward using them in homes as well. The two kinds of solar panels are different in one
