How is the LONGi 445 photovoltaic panel

Overview

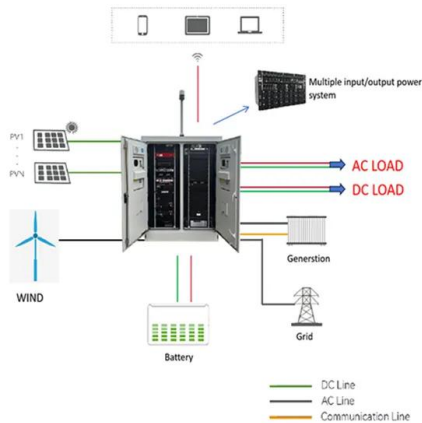

An already high efficiency of 20.5% is further enhanced by bifacial design, which allows to harvest up to 25% more energy from the back side of the panel. The heat is also less of a threat with this module: with one of the lowest temperature coefficients in the industry, LONGi 445w loses just 0.35% of efficiency for every.

Careful module BOM selection and solar cell process optimization ensure solid PID resistance. Enhanced electrical design and lower operating current reduce the risk of hot spot formation and decrease resistive losses.

A 35 mm frame made from anodized aluminum alloy and 2 mm layer of protective tempered glass make this module resistant to the foulest of weather. These panels pass a hailstone test where they take on 1" hail grains.

Slow degradation over the next 3 decades is guaranteed by the manufacturer. The performance will decrease no more than 2% during the first year.
