

## Solar Energy South Africa

# How many years do solar panels usually last

## Overview

---

What's the average lifespan of a solar panel?

The average lifespan of a solar panel is typically around 30 to 40 years. How long do solar panels last?

Surprisingly, solar panel lifespan has always been extremely good. Given they have no moving parts, there is rarely something that can go wrong within the solar panel itself, which means they can keep generating electricity for a very long time. However, what has improved is the level a solar panel will be performing at after 25 years of usage.

Do solar panels expire?

There is technically no expiration date on solar panels. However, over time, they naturally tend to become less efficient at producing energy. Some panels can also break due to physical damage from extreme weather conditions.

How often should solar panels be replaced?

One way to keep your solar system operating at its peak is to sync up your roof maintenance with solar panel maintenance and replacement. Depending on roof shingle types, a typical roof needs to be replaced about every 25 years, which is the perfect time to potentially replace your solar panels.

How long does a 405 watt solar panel last?

After 25 years, a 405 watt panel will generate 324 watts – not many other appliances offer that kind of longevity. Plus, as the panels are by far the cheapest part of any solar system, you can always add a couple more to make up for the loss at a later date – if you have the capacity on your inverter.

Are solar panels durable?

Solar panels are generally very durable. Most solar panels are designed and tested to withstand the elements like hail, high winds, and heavy snow loads.

And thanks to their lack of moving parts, solar panel systems usually require little to no maintenance. Still, maintaining your solar panels can boost production.

Why do solar panels lose power over time?

Over time, solar panels lose their ability to absorb sunlight and convert it into solar energy due to factors such as hotter weather and the natural reduction in chemical potency within the panel. This is what is referred to as the “degradation rate”. The lower the degradation rate, the better the panel.

## How many years do solar panels usually last

---

### How Long Do Solar Panels Last? Solar Panel Lifespan ...

A solar panel performance warranty outlines how long solar panels will produce power, as well as their expected performance at the end of the warranty period. For example, a warranty that guarantees 87.5% performance after 25 years ...

### [How Long Do Solar Panels Last? UK](#)

This guide explores the lifespan and durability of solar panels, the factors that affect solar panel longevity, and the steps you can take to ensure they last as long as possible so you can get the most out of your investment. ...

### How Long Do Solar Panels Last? Do They Degrade ...

When it comes to installing a renewable energy system in your own home, you are going to make sure that the juice is worth the squeeze. Luckily, solar panels are one thing you can buy and rely on for decades to ...

### How Long Do Solar Panels Last? Do They Degrade ...

Luckily, solar panels are one thing you can buy and rely on for decades to come - with most companies guaranteeing them for 25 years/30

years. If a company is prepared to guarantee something for 25/30 years you ...

## How Long Do Solar Panels Last? A Comprehensive ...

A solar panel's efficiency is the amount of sunlight (solar irradiance) that falls on the solar panel that can be converted into usable electricity. Modern solar panel efficiencies range between 16 and 22%, with ...

### [How long do solar panels actually last?](#)

For most Tier 1 solar panels, the degradation rate is .30% meaning that each year, the panels performance is reduced by .30%. Over 25 years, that adds up to a total of 6.96% meaning your panels will operate at 93.04% of their original ...
