# How much does a Fengli power tower cost

## Overview

---

If you have a high roof that gets enough wind speed on a regular basis then you may well consider installing a roof mounted wind turbine. They vary in power from about 0.5 kW to 2.5.

For those that are serious about using wind as a means of providing renewable energy for a local source and perhaps benefitting from the Feed in Tariff, free-standing wind turbines.

One of the attractive things about installing a renewable energy source is the chance it gives you to sell your excess electricity to the power companies.

Finding the initial outlay for your wind turbine development can often be a problem. There are a number of financial institutions and grants available that you can now take advantage.

If you are a business you may have to pay a levy or tax on the energy such as gas, electricity or coal that you is used in the day to day running of your.

How much does a roof-mounted wind turbine cost?

A roof-mounted turbine could be a good option if you have a high roof that regularly gets enough wind speed. The average cost of a roof-mounted domestic wind turbine is £2,000. These turbines are generally cheaper and easier to install than freestanding wind turbines. However, they're typically small, varying in power from around 0.5 to 2.5 kW.

How much does a turbine tower cost?

Doubling the tower height requires doubling the diameter and quadrupling the amount of material in the tower. The cost of the tower is around \$200/kW. Costs for a 1.5 MW turbine can land around \$300,000, while towers for larger turbines can cost over \$1 million.

How much does a freestanding wind turbine cost?

Freestanding wind turbines are more expensive to install, but they're much more effective if you're serious about going fully renewable or perhaps even

benefitting from the Feed-in Tariff. Prices vary from around £7,000 for a 1.5 kW freestanding wind turbine to around £70,000 for a 15 kW one.

How much does a 12 MW wind turbine cost?

The most powerful 12 MW wind turbine costs up to \$400 million to manufacture and install. Costs for utility-scale wind turbines can be broken down into three categories: manufacturing, transport and installation, and operations and maintenance. Researchers are constantly working to drive down the costs.

How much does a wind turbine cost?

A 1.5 kW turbine would cost approximately £7,000 and deliver around 2,600 kW over a year depending on your location and wind speeds. A larger array that has a 15 kW capability would cost in the region of £70,000 and return approximately 36,000 kW of energy over a year. You can find a list of smaller wind turbine manufacturers (up to 100 kW) [here](#).

How much does a turbine cost per kilowatt-hour?

Ongoing maintenance expenses have been estimated at 1-2 cents per kilowatt-hour produced; for a 'typical' onshore turbine that may amount to \$40K-\$50K per turbine. Adding to the complexity: O&M and repair costs increase significantly as turbines age. Repairs can be a significant capacity reducer, extending the payback period.
