How to apply for construction of photovoltaic panels on the roof

Overview

Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

Can a solar panel be installed on a roof?

If you wish to install a solar panel on your roof building regulations will normally apply. The ability of the existing roof to carry the load (weight) of the panel will need to be checked and proven. Some strengthening work may be needed. Building regulations also apply to other aspects of the work such as electrical installation.

Can I install solar panels if I don't meet building regulations?

Your local authority can also apply for a Confiscation Order to take away any money you've earned with your system – so there's absolutely no benefit to installing solar panels that don't meet building regulations. It's crucial that your solar installation follows all building regulations.

Can I use solar roof tiles instead of solar panels?

What you need to do is speak to your local council and let them know about your decision to install. Unless there is a valid reason to state otherwise, permission for the installation should be granted. In some conservation areas (such as historical ones), it may be requested that you use solar roof tiles instead of panels.

Do I need planning permission to install solar panels in the UK?

As mentioned above, solar panel installation in the UK is normally allowed without requiring planning permission. However, it will probably be required in some instances, such as properties classified as listed buildings, solar panel

installation within conservation areas, or specific types, like ground-mounted solar panels.

Can you put solar panels on a building?

Yes, if the installation falls under permitted development. However, if you live in a conservation area or world heritage site you can't put solar panels on the principal or side elevation walls of your house if it fronts a highway. This would require a planning application. Are there restrictions for solar panels on a listed building?

How to apply for construction of photovoltaic panels on the roof

Solar 101: Attaching your solar system to your roof

Bigger chunks of roof are easier, and cheaper, to install solar panels. Keep in mind that a standard residential solar panel is roughly five and a half feet tall by three feet wide. Pictured below, this 290 to 320 watt solar ...
