# How to read the brand parameters of photovoltaic panels

## Overview

---

The wattage of a solar panel represents the electricity it generates under specific test conditions. These conditions include a solar irradiance of 1,000 watts per square meter, solar cell temperature of 25°C, and 1.5 air mass. It's important to note that the rated wattage is measured in controlled lab conditions, and real-world.

Solar panel manufacturers provide two types of warranties: product warranty and power output warranty, each with its own coverage period. A reliable warranty ensures free replacement.

After learning the 500W, 300W, 175W, and 5W solar panel specifications, you must be wondering about the best solar panel specifications. Actually, the specifications depend on the intended use and priorities of the user.
