

Solar Energy South Africa

Latvia hygea energy

Overview

Latvia is a net energy importer. Primary energy use in Latvia was 49 TWh, or 22 TWh per million persons in 2009. In 2018, electricity consumption per capita was 3731 kWh. Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030.

The 2021-30 plan set a target of reducing greenhouse gas emissions by 65% compared to 1990. There is a target of being carbon neutral by 2050.

It was agreed in 2018 that Estonia, Latvia and Lithuania would connect to the European Union's electricity system and desynchronize from the Russian BRELL power system. This is expected to be completed by February 2025. An interconnector linking.

Fossil fuelNatural GasFrom 1 January 2023 Latvia banned the import of natural gas from Russia. The replacement comes from.

Latvia's largest battery energy storage system unveiled

On November 1 Latvia's largest wind energy producer Utilitas Wind opened the first utility-scale battery energy storage battery system in Latvia with a total power of 10 MW and capacity of 20 MWh in Targale, Ventspils region. This autumn, the Battery Energy Storage System (BESS) will be connected to the Latvian electricity transmission system

Energy in Latvia

Renewable energy includes wind, solar, biomass and geothermal energy sources. Almost half of the electricity used in the country is provided by renewable energy sources. The main renewable resource is hydroelectric power. Latvia has laws that regulate the building of power plants and plans to sell electricity at higher prices. This is a stimulus for investment, especially taking into

[Latvia , World Energy Council](#)

The most common renewable energy sources in Latvia are biomass and hydropower. There is a considerable potential to further develop wind power and solar energy, and this sector is growing considerably in the region. To boost economic growth and mitigate the effects of the Covid-19 crisis, entrepreneurs also have access

to several support
