# Liberia standard microgrid

## Overview

---

### What is Standard Microgrid?

Standard Microgrid refers to a system that provides basic power needs to the greatest number of people using Standard Microgrid's proprietary grid management system. This architecture incorporates flexible, rugged, and modular components with proprietary grid management tools to deliver reliable, modern alternating current (AC) power services in harsh and remote environments.

### What is the standard microgrid switch?

The Standard Microgrid Switch is used to enable seamless, remote demand side control of the grid. In conjunction with the Microgrid Manager Mobile App, it provides the ability to sell prepaid power services, report use and misuse, and prevent overutilization of the grid.

### How long does it take to deploy a microgrid?

A Standard Microgrid 10kW micro power utility, fully contained within a 20' shipping container, can be deployed in three days and has the capacity to deliver power to up to 150 homes. Enabling seamless, remote demand side control of the grid is the Standard Microgrid Switch.

### Standard Microgrid Ribbon Cutting for 10th Solar Microgrid in ...

Standard Microgrid (SMG) serves power to over 7,000 people in Zambia, using microgrids consisting of solar and energy storage, not requiring diesel back-up or fossil fuels. The company is busy building a 150- microgrid portfolio in Zambia, which will bring productive, reliable AC power to ~130,000 people in Zambia who currently go dark at night

### Press Release: Sweden's Beyond the Grid Fund for

Standard Microgrid Zambia, a developer and operator of standalone solar microgrid systems that has been piloted in Zambia's Southern Province, has also received financing from the BGFZ to support its plans to build 150 microgrid systems across the country. "We are tremendously excited to work with BGFZ to energize the sector, and are ready

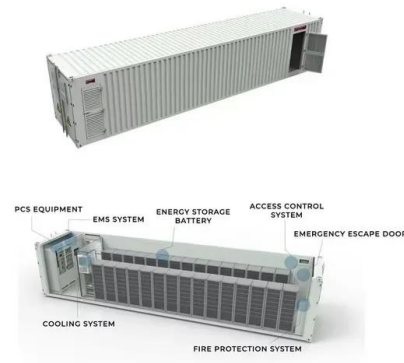

### [Liberia -- Climatescope 2017](#)

Liberia is still working to pick up the pieces of its power sector, after two civil wars from 1998 to 2003 destroyed the country's pre-war installed on-grid capacity of 191MW. a 1MW small hydro project in Bong County, a 60kW hydro microgrid, two biomass plants totaling 96kW and a 24kW solar microgrid in Lofa County. These are all off-grid
