# Lithuania wiso energy

## Overview

---

Lithuania is a net energy importer. In 2019 Lithuania used around 11.4 TWh of electricity after producing just 3.6 TWh. Systematic diversification of energy imports and resources is Lithuania's key energy strategy. Long-term aims were defined in the National Energy Independence strategy in 2012 by Lietuvos Seimas. It was estimated that strat.

How many wind power plants are there in Lithuania?

According to the LVEA, around 40 wind power and hybrid projects are currently under development in Lithuania, which would bring the capacity of wind power plants to 2.6 GW. The development of renewable energy sources is a strategic objective for the country. The aim is to generate more than 90% of electricity from renewable energy sources by 2030.

Is Lithuania a net energy importer?

Lithuania is a net energy importer. In 2019 Lithuania used around 11.4 TWh of electricity after producing just 3.6 TWh. Systematic diversification of energy imports and resources is Lithuania's key energy strategy. Long-term aims were defined in the National Energy Independence strategy in 2012 by Lietuvos Seimas.

How much electricity will Lithuania generate in 2022?

In total, Lithuania will generate 4.25 TWh of electricity in 2022 – almost 60% (2.545 TWh) of the total from renewable energy sources (hydropower, wind, solar, ambient heat, biomass and biofuels).

Is Lithuania a good country for solar energy?

Lithuania has been significantly expanding its solar parks, growing from zero in early 2000s to 814 MW capacity in 2022. Lithuania is a net energy importer. In 2019 Lithuania used around 11.4 TWh of electricity after producing just 3.6 TWh. Systematic diversification of energy imports and resources is Lithuania's key energy strategy.

What is Lithuania's national energy strategy?

The National Energy Strategy reflects a more mature approach to energy security and contributes to Lithuania's transition to a low carbon and sustainable energy supply following the EU and global energy and climate objectives. However, the practical implementation of the energy transition is crucial.

Should Lithuania turn to domestic energy sources?

First, a high dependency on external energy sources and nuclear energy phase-off creates a pressure on Lithuania to turn to domestic energy sources; the development of renewables (especially, biomass and wind-powered generation) appears as a natural choice.
