

Solar Energy South Africa

Luxembourg total forward energy

Overview

What is Luxembourg doing about energy transition?

Luxembourg is pushing for a more aggressive approach on energy transition at the EU level and in some cases has adopted national targets that exceed the requirements of EU directives. Luxembourg's renewable energy share is growing; it reached 6.4% of gross final energy consumption in 2017.

How will Luxembourg improve its energy system?

In this context, Luxembourg plans to expand and upgrade its electricity grids, but the country would benefit further from the deployment of measures to increase energy storage and demand-side response in its power system. It is also important to ensure competitive markets that foster innovation and new energy services.

How much energy does Luxembourg use?

In 2017, Luxembourg's energy consumption was 48.4 terawatt hours (TWh), in line with the 2020 energy efficiency target of not surpassing 49.3 TWh in final energy consumption. However, energy consumption has been increasing since 2016, especially in the transport sector.

How is Luxembourg transforming the European electricity market?

Luxembourg is embedded in the European electricity market, a sector that is transforming swiftly as rising shares of variable renewable generation, such as wind and solar PV, put increased attention on security of supply.

Does Luxembourg need a new electricity infrastructure?

Luxembourg aims to cover over a third of 2030 electricity demand with renewables, mostly through variable renewable energy (VRE) from PV and wind generation. The share of VRE generation in imported electricity is also expected to increase significantly. Taken together, these factors will require substantial investment in electricity infrastructure.

Why does Luxembourg have a low energy cost?

The low costs of energy in Luxembourg and the high purchasing power of its residents represent a significant barrier to achieving the energy sector targets. Low taxes result in low electricity, natural gas and heating oil prices providing little incentive to invest in renewables and energy efficiency.
