Maldives klg energy

Overview

What is the main energy source in Maldives?

In Maldives, the main energy source is imported fossil fuel (99.9%), with the bulk being diesel. This fuel is used primarily for electricity production and transportation.

What is the primary energy conversion in Maldives?

In Maldives, the primary energy conversion is from diesel energy to electricity. Nearly 100% of all electricity produced in Maldives comes from diesel-based systems. The generation and distribution of electrical systems are decentralized, with each separate island operating a self-sustaining diesel power generation and distribution system.

How is electricity price regulated in Maldives?

The price of electricity for public supply is regulated by Maldives Energy Authority. The calculation of electricity tariff is based on the cost of electricity generation, distribution and ability to pay. For the public electricity generation the government has been giving subsidy to meet the increase in fuel price. 9. New/Renewable Energy Resource.

How much tCO₂ does Maldives emit per year?

Maldives, aiming for low carbon development, emits over 80% of its total emissions from energy use. During this period, the emission from energy use has been increasing at a rate of about 6-8% per year. This results in an annual emission of 75,527 tCO₂ from the energy sector alone.

Does Maldives import electricity?

Maldives imports all its energy needs from abroad. STELCO provides electricity to 27 of 199 inhabited islands designated by the Government. STELCO's installed capacity is about 35% of the whole country, which is 59.13 MW and it serves peak demand of around 39 MW. It imports diesel, gasoline, LPG,

kerosene and aviation fuel.

Is Maldives a net energy importer?

The Maldives is a net energy importer of petroleum products. There is no major energy production in the country except for electricity production from diesel fired power stations. Energy demand and supply analysis are given in Table 5 and 6.
