

Solar Energy South Africa

Myanmar vs energy international

Overview

How much energy does Myanmar have?

In 2017, Myanmar's proven energy reserves comprised 105 million barrels of oil, 5.56 trillion cubic feet of gas, and 542.56 million metric tonnes of coal. The country is a net exporter of energy, exporting substantial amounts of natural gas and coal to neighbouring countries. However, it imports around 90% of its total oil requirements.

How has Myanmar's energy consumption changed over the years?

Myanmar's total final energy consumption (TFEC) increased by about 2.3% per year from 9.4 Mtoe in 1990 to 17.46 Mtoe in 2017. The transport sector grew the fastest with an AAGR of 7.5% between 1990 and 2017. Consequently, this sector's share of the TFEC increased from around 4.7% in 1990 to almost 17.8% in 2017.

Can solar power improve the quality of Myanmar's electricity supply?

The government announced in the MNEP its plan to increase the capacity of renewable energy to 2,000 MW by 2030. Solar power development potentially contributes to the quality improvement of Myanmar's electricity supply systems from several points of view.

Is biomass a primary energy source in Myanmar?

Biomass is an important energy source in Myanmar. In 2017, biomass constituted 48% of total primary energy supply, considerably higher than oil (29%), natural gas (16%), and hydropower (5%) (Figure 2.30). Most biomass is consumed at a household level, and ordinary households mostly use biomass as an energy source (Figure 2.31).

Does Myanmar have a yearly energy plan?

The yearly plan excludes coal-based power plants, of which the country currently has 120 MW of installed capacity. Based on the Energy Masterplan of

Myanmar, three scenarios are considered (Table 12.3). In this masterplan, the shares differ between scenarios.

How is commercial energy consumption projected in Myanmar?

In Myanmar, commercial energy consumption is projected on the basis of the energy requirements of major sectors (industry, transport, and agriculture)). Choice of fuel type is determined by available supply, since energy demand must be met mainly by domestic Figure 12.10.
