

## Solar Energy South Africa

# NDRC Microgrid 2025

## Overview

---

How many distributed energy microgrid projects will China build by 2025?

It is estimated that China will build about 50 distributed energy microgrid demonstration projects by 2025, forming a distributed microgrid technology system, market system and management system.

What is a complex microgrid?

Adoption of complex microgrids can involve multiple energy carriers in integrated energy systems, e.g. involving passive design, electricity, heat, light, and other energy service requirements.

What is the future development direction of microgrids in China?

The future development direction of microgrids in China will therefore be towards an energy system that integrates electricity, gas, water, and heat resources, achieves mutual coupling, and solves the problems of efficient energy utilization and peak regulation .

What is Microgrid technology?

Microgrids are the most effective application form of integrated energy. The coordinated optimization of multiple energy sources such as electricity, gas, and heat in a local area is the basis for comprehensive energy development. Microgrid technologies, coupled with Internet technologies, can realize the development of regional “energy Internets”.

What role will microgrids play in the future power grid?

As an important part of the smart grid of the future, microgrids will play an important role in the future power grid by taking advantage of its strengths such as accommodation of diversification of energy forms, flexibility of grid connection interfaces, customization of power quality, and bi-directional energy information flow.

What is the research on DC microgrids in China?

From 2009 to 2016, research on DC microgrids in China has gradually involved many different aspects, such as the study of DC microgrid power electronic converters, DC circuit breakers, and other key equipment, as well as operation control technology, protection, and energy management. 1.2 China's Current and Planned Policies Regarding MG
