Namibia power warehouse

Overview

Namibia Power Corporation, commonly known as NamPower, is the national electric power utility company of . The company is responsible for generation, transmission and distribution of electricity in the country. Its activities are licensed, supervised and regulated by the Electricity Control Board (ECB) of Namibia.

Where did NamPower (swawek) start?

NamPower (SWAWEK) actually started at VAN ECK POWER STATION. When it was built in the early seventies the first power was distributed from this Power Station and all distribution lines were connected to the 66 and 220 kV High Voltage Yards.

Can Namibia become a net exporter of energy?

Over the long-term, the government and NamPower have committed to making Namibia energy self-sufficient (and eventually a net exporter of power) by building new domestic generation capacity. NamPower has made some progress in efforts to increase its generation capacity.

Does Namibia have a solar power plant?

The government, the ECB, and NamPower have all expressed interest in grid-connected solar and wind renewable solutions, and in May 2015, Namibia inaugurated its first-ever solar power plant – a 4.5 MW plant – which represents one percent of the country’s current production of energy.

Does Namibia have a centralized power system?

Namibia is evolving from a centralized model dominated by one large utility, NamPower, to a hybrid decentralized model with multiple actors generating and supplying electricity. This represents a significant shift in the generating mix.

How much power does Namibia need?

Peak demand is over 600 MW. Namibia has long relied on imported power

from South Africa (Eskom) and other neighboring countries, but South Africa's own economy has put strains on its domestic electricity generation capability and thus its ability to export. Namibia has a power purchase agreement with Eskom which expires in 2025.

How did NamPower make Namibia less reliant on South Africa?

In 2021, NamPower also completed the N\$ 3.2 billion TransCaprivi Interconnector which connects central Namibia directly with the power grids of Zambia and Zimbabwe, thereby making Namibia less reliant on South Africa's transmission network.

Namibia power warehouse

Vacancies

NamPower continues to progress toward a demographic profile more reflective of the nation's mix of backgrounds and heritages, increasing the percentage of woman in our workforce, and maintaining a senior management cadre unique in Namibia for its diversity and representative nature.

Namibia

NAMIBIA . Though it is large, the southwestern country of Namibia has a relatively small population -- and an interesting energy landscape. Namibia has a history of load shedding problems and has long relied on imported power from Eskom, on top of a low electrification rate of 56.3% (as of 2020). The drought at the Kariba Dam, the world's largest reservoir and a major ...
