[World Energy Outlook 2024 - Analysis](#)

The Global Energy and Climate (GEC) Model key input dataset includes selected key input data for all three modelled scenarios (STEPS, APS, NZE). This contains macro drivers such as population, economic developments and prices as well as techno-economic inputs such as fossil fuel resources or technology costs.

Niue

Niue (pronunciación en inglés: /'nju:el/; en niuano, Niue-fekai) es un territorio insular de 262 km² en el océano Pacífico sur, conocido como la Roca de Polinesia. [3] A pesar de poseer un autogobierno con amplia autonomía mantiene un

estatus de libre asociación con Nueva Zelanda. Está localizado a unos 2400 kilómetros al noreste de Nueva Zelanda, en un triángulo ...

Global overview - Renewables 2024 - Analysis

In 2030, renewable energy sources are used for 46% of global electricity generation, with wind and solar PV together making up 30%. By 2030, however, solar PV becomes the foremost renewable electricity source, followed by wind, both surpassing hydropower.

Global Energy Perspective 2024 , McKinsey

Increased energy demand and the continued role of fossil fuels in the energy system mean emissions could continue rising through 2025-35. Emissions have not yet peaked, and global CO₂ emissions from combustion and industrial processes are projected to increase until around 2025 under all our bottom-up scenarios. The scenarios begin to diverge toward ...
