Overview

What is an off-grid photovoltaic system?

An off-grid photovoltaic system, also known as a standalone photovoltaic system, is a solar power generating system that functions independently of the main electrical grid. It is typically composed of solar panels, batteries, charge controllers, and inverters to generate and convert solar energy into a usable form of electricity.

What is an off-grid Solar System?

With an off-grid system, you are entirely independent of the grid and 100% responsible for your power needs. You won't be able to harness extra electricity from the utility company. Learn more about off-grid vs. grid-tie systems. Ready to add an off-grid solar system to your home?

What is an off-grid energy system?

What is an off grid system?

An off-grid energy system is akin to having your own power source right at home. To achieve this, it relies mainly on solar panels to capture energy from the sun. This collected energy is then stored in a specialised battery, ensuring it's readily available when you need it, such as during nighttime or on cloudy days.
