Overview

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

Should a large solar PV system be engineering?

All decisions regarding the engineering of a large solar PV power system must be carefully considered so that initial decisions made with cost savings in mind do not result in more maintenance costs and decreased performance later in the system's lifespan.

How to design a large-scale PV power plant?

Designing a large-scale PV power plant requires infrastructure that can handle such an installation. For instance, the location must be selected carefully to avoid shading from buildings, trees, or other obstructions.

What is a large scale PV system in terms of size?

A large scale PV system is defined as a system with a south-facing roof or façade area sufficient to site from 200m² to 1500m² of PV. This corresponds to an installed 'Watts Peak' of 20 to 100kWp.

How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.
