Photovoltaic panel prices hit new low

Overview

Module prices have hit the record-low of less than 0.15 EUR/W for low-cost products, now even submerging pre-Covid levels, making it extremely difficult for European manufacturing companies to sell. Will solar panel prices drop 40% this year?

Tim Buckley, director of Climate Energy Finance, speaks to pv magazine about the current steep trajectory of solar module prices. He estimates that PV panels prices will end up dropping by 40% this year and predicts the closure of old technology and sub-scale solar manufacturing facilities, both in China and globally.

Are photovoltaic panel prices falling?

Never before in the history of photovoltaics have panel prices plummeted so significantly in such a short space of time. For a month or two now, the values have been below the previous all-time low of 2020 and even more so below the production costs of most manufacturers.

Why are photovoltaic module prices falling?

One reason for this is the "PV module glut" in warehouses in Europe, according to pvXchange's Martin Schachinger. We have all been asking ourselves for some time now: How far can photovoltaic module prices go down before the bottom is finally reached?

Apparently, there is still room for further drops, as all prices have fallen again this month.

Why are solar module prices so low in Europe?

If you want to cooperate with us and would like to reuse some of our content, please contact: editors@pv-magazine.com. Solar module prices have never fallen so sharply in such a short period of time. One reason for this is the "PV module glut" in warehouses in Europe, according to pvXchange's Martin Schachinger.

Why have solar module prices fallen so sharply?

Solar module prices have never fallen so sharply in such a short period of time. One reason for this is the “PV module glut” in warehouses in Europe, according to pvXchange’s Martin Schachinger. We have all been asking ourselves for some time now: How far can photovoltaic module prices go down before the bottom is finally reached?

.

Are Solar Choice prices still high?

The Solar Choice price index for December shows that we are still approx 10% higher than the recent low point from Sept 2021. Tony Seba pretty much graphed out these cost declines more than a decade ago. for anyone who was listening to his logic rather than calling hin crazy!
