The Homeowner's Guide to Home Battery Backup

3 ???· A fully-charged 10kWh battery can run 86-100% of a home's power load for a 72-hour span, then longer as long as the battery is able to recharge, according to one study. The efficiency depends on how many devices and systems are using power, especially the heating and/or cooling, and if the batteries are being recharged during this period.

Measuring Venezuela's power outage in real time [OC]

According the the article, they only have hydroelectric power plants as their main power source - of which, nationalization of their power grid has caused them problems since 2007. For example, they had a major blackout in 2016 that lasted for months. Due to power shortages, the government has to shut down the power every now and then as well.
