How solar energy is generated?

The PV technology convert visible spectrum to electricity and thermal collectors use both infrared and visible spectrum for energy generation. So the energy generation from solar radiation can be in the form of electrical energy or thermal Energy. The various conversion paths of solar energy is described in the Fig.2.

How does solar power work?

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use – electricity and heat. Both are generated through the use of solar panels, which range in size from residential rooftops to ‘solar farms’ stretching over acres of rural land. Is solar power a clean energy source?

.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

How can solar energy be harnessed?

This energy received from the sun can be harnessed directly or indirectly using various technologies for thermal applications as well as for converting into electricity by the means of photovoltaic (PV) systems. Over the years the photovoltaic technology advanced a lot and the efficiency of solar cell has considerably improved.

How to generate thermal energy from solar energy?

The generation of thermal energy from solar can be realized using various solar reflecting collectors. Most of the technology works on the principle of reflection, radiation and convection or based on the thermosiphon effect. Sun is a gigantic star, with diameter of 1.4 million kilometer releasing electromagnetic energy of about  $3.8 \times 10^{20}$  MW.

What are the basics of solar energy technology?

Learn solar energy technology basics: solar radiation, photovoltaics (PV), concentrating solar-thermal power (CSP), grid integration, and soft costs.
