

## Solar Energy South Africa

# Proterra battery Germany

## Overview

---

Where are Proterra batteries made?

Our batteries are designed from the cell level up for commercial and industrial usage and have industry-leading energy density, a flexible design, and ruggedized commercial-grade housing. Designed in Proterra's Silicon Valley and manufactured in Greer, South Carolina, by the best minds in battery engineering.

Did Volvo Group buy Proterra & Proterra?

The Volvo Group has today completed the previously announced transaction whereby the Group acquired the battery business from Proterra Inc. and Proterra Operating Company Inc.

What is Proterra's battery?

Proterra's battery systems have been designed and manufactured in the United States. They have been proven through over 20 million service miles driven by transit customers and have been selected by world-class commercial vehicle manufacturers to electrify delivery vehicles, work trucks, construction and mining equipment, school buses, coach buses, and more.

Is Proterra's battery technology a threat?

Proterra's battery technology is proven solid, and they have a years-long lead over other competitors still in the design phase. New battery chemistries you read about and other companies raising funds for are not a threat, as they will take years to prove themselves before being adopted in the marketplace.

When does Proterra's battery factory launch?

Proterra's battery factory is expected to launch in the second half of 2022 with multiple gigawatt hours of annual production capacity for Proterra's battery systems.

Are Proterra EV batteries good for commercial vehicles?

Our flexible design enables Proterra® EV batteries to be the best choice for commercial vehicles ranging from transit buses and trucks to delivery vehicles, construction equipment, and more. The Proterra S series batteries already power medium- and heavy-duty applications on the roads throughout North America.
