What Is a Solar Inverter? A solar inverter, also known as a PV inverter, is a type of electrical converter that converts the variable direct current (DC) output of a photovoltaic (PV) solar panel into a utility frequency alternating current (AC) that can be fed into a commercial electrical grid or used by a local, off-grid electrical network. Basically, a solar inverter is a critical balance

FAQs

The inverter converts the electricity from direct current (DC) to alternating current (AC). The inverter typically lasts 15-20 years; you may have to replace the inverter at some point during the life span of the solar panels, and that replacement cost is not included. Lastly, the inverter is wired directly into the breaker panel box.
