Solar support airbag comb

Overview

Can origami-inspired combined cushion airbags improve soft-landing performance?

To improve the cushioning performance of soft-landing systems, a novel origami-inspired combined cushion airbag is proposed. The geometry size, initial pressure, and exhaust vent area of the cushion airbags are designed preliminarily using a theoretical model.

What is a parabolic leaf spring & air bag kit?

Parabolic Leaf Spring and Air Bag Kit gives you the flexibility to cater for varying load of up to 600kg. Therefore, whether it is tools during the week or a rooftop tent on the weekend; ARB's Parabolic Leaf Springs and Air Bag Kit system has you covered and provides the new standard in comfort and weight carrying adjustability.

Why should you choose a modular airbag system?

Airbags Our airbag systems achieve a balance between individual fine tuning for the specific vehicle restraint system and the standardized construction of the modules, thanks to their modular design. This ensures flexibility in the design and optimal use of the given installation space with minimal weight. Side Airbags.

How much airbag volume can a BiR airbag protect?

The next generation now covers a range from 100 to 190 l of airbag volume so that a single BiR airbag can be used to protect two occupants on a passenger side bench, for example in a van, Figure 2. Progress of inflator performance and system weight from BiR generation 1 to 3 (© ZF).

What are the features of Alpinestars® Tech airbag system?

LED display on the front of the chest. Magnetic closure to automatically activate the system. 1725g in size medium including back protector. Explore

Alpinestars® Tech Air airbag systems for superior motorbike safety. Advanced protection with autonomous technology.

What makes magom a low-cost airbag solution?

Low-cost solution Magom's key innovation is a silicon valve integrated into the airbag, which adapts the physical reaction of the airbag depending on the situation.
