Overview

Who is Enphase Energy?

About Enphase Energy, Inc. Enphase Energy, a global energy technology company based in Fremont, CA, is the world's leading supplier of microinverter-based solar and battery systems that enable people to harness the sun to make, use, save, and sell their own power—and control it all with a smart mobile app.

How does Enphase work in Portugal?

This includes the self-consumption feature, which minimizes the use of electricity from the grid. In addition, Enphase offers 24/7 customer support. “Homeowners across Portugal are looking to take control of their energy needs,” said Bruno Pereira, CEO of LEFE, an installer of Enphase products in Portugal.

Why is Enphase expanding in the overseas solar market?

This reflects Enphase’s highly growing customer base in international markets and its continuous efforts to expand in the overseas solar market. Spain displays solid residential solar growth potential as homeowners hunt for a reliable and sustainable clean energy generation system as a substitute for highly-priced electricity.

Why is Enphase the future of solar energy?

“Solar energy is one of the cleanest and more affordable ways to produce electricity, and Enphase gives us strong confidence in the industry’s future,” said Angel Baños, general manager at Solideo.

Why are residential solar deployments growing in Spain?

Residential solar deployments in Spain are growing exponentially as favorable regulatory developments and high electricity prices are motivating homeowners to make the switch to a more sustainable clean energy

generation.

Are Enphase microinverters backed by a 25-year warranty?

The company's microinverters are backed by a 25-year warranty in Spain. The Enphase microinverter systems will be outfitted with IQ Gateway™, which connects an Enphase-based solar system to the Enphase® App monitoring platform and helps make per-panel energy monitoring and insights for operations and maintenance easy.
