

## Solar Energy South Africa

# The Doomsday Solar Power Novel

## Overview

---

What happens when a solar flare destroys the power grid?

As massive solar flares bombard the Earth, an intense electromagnetic pulse instantly destroys the power grid throughout North America. Within hours, desperate citizens panic and anarchy descends. Surrounded by chaos, Casey Drager, a student at Tulane University, must save herself from the havoc in the streets of New Orleans.

What happens 50 years after the Domsday Battle?

It is fifty years after the Domsday Battle. The Trisolarans and Earth are locked in an era of deterrence, after Luo Ji has proven that the universe is actually a Dark Forest—any spark of intelligent life will be extinguished by others, protecting their own best interests. But first, let me rewind:.

How many books are there in the solar manifesto?

There are two books here – I originally chose The Solar Manifesto because it was the first, but Scheer also wrote The Solar Economy, which came out in 2004 and so is more up to date. It reinforces everything the first one said, but adds more detail and more practical material. The books reflect the author. They're so strong.

Is solar power viable?

Yes, solar power is viable. It works very well. You put a solar panel out in the sun and it will last for at least 20 years. There are only two issues with solar power – one of which will go away, the other of which is intrinsic.

Why should you read dystopias & apocalypses?

From an opal mine in Australia to the seed vault at Svalbard, from a wheat farm in Kansas to a crocodile ranch in Malaysia, these are stories of adaptation, ingenuity, and optimism for the future of our world and others. For readers who are tired of dystopias and apocalypses, these visions of a brighter

future will be a breath of fresh air.

Is solar a Democrat/Liberal issue?

Yes. Although renewables in general, and solar in particular, are perceived to be Democrat/liberal issues, the whole energy independence bit plays well to a Republican audience as well. So solar tends to be supported across the board. It's very popular with everybody except our friends in the oil and coal industry.
