Uganda nari energy

Overview

Will Uganda become an energy producer by 2027?

Uganda is set to become an energy producer by 2027, allowing the landlocked nation to export oil from two oilfields via a \$4bn, 1,443km-long pipeline that would run through Tanzania to the port of Tanga. The developments will transform east Africa's energy market but have been criticised for displacing communities and damaging the environment.

What is Uganda's National Energy Policy 2023?

In its National Energy Policy 2023, the Ugandan government aims to reach universal access to electricity and 50% access to clean cooking by 2040.

What percentage of Uganda's energy comes from oil?

Oil accounted for less than 10% of Uganda's total energy supply in 2021, with all oil products being imported through Kenya and the United Republic of Tanzania, and primarily used for transport. Uganda's first commercial oil discovery occurred in 2006 in the Lake Albert basin.

What is Uganda's energy policy?

Uganda has developed a number of subsectoral policies, including the 2008 National Oil and Gas Policy (currently under review), the Renewable Energy Policy (2007), and the Electricity Connections Policy (2018). In recent years, Uganda has improved the coverage, quality and timeliness of energy balances and related data.

Why is universal access to electricity a challenge in Uganda?

Achieving universal access to clean and reliable energy sources for electricity and cooking remains a challenge in Uganda and is a high priority for the government in achieving economic and social development.

What role does the energy sector play in Uganda?

The energy sector will play an important role in helping Uganda achieve this. Uganda is endowed with abundant natural resources, including fertile soils; petroleum deposits; and reserves of iron ore, phosphates, copper, cobalt, aluminium and gold. The agricultural sector employs over 80% of the workforce, mostly in subsistence farming.
