By following the best practices outlined in this guide, you can ensure the proper storage and care of your lithium solar batteries. Remember to choose an ideal storage location, prepare the batteries before storage, and implement discharge strategies.

In summary, if you want to correctly store your solar batteries so they can last a long time and perform well when you need them, don't store them outside. Instead, store your solar batteries in a dry, well-ventilated, temperature-controlled environment, away from direct sunlight, water, heat sources, or freezing temperatures. Can solar batteries be stored outside?

Storing solar batteries outside can irreversibly damage the battery. The image shows a swollen solar battery with a melted plastic case caused by increased internal temperature. In summary, if you want to correctly store your solar batteries so they can last a long time and perform well when you need them, don't store them outside.

How long do solar batteries last?

You can store solar batteries for a shorter period at high or low temperatures. However, you can store them for much longer at room temperature. You can generally store lead-acid batteries (Flooded, AGM, and Gel) for up to 2 years if you maintain and store them properly (recharge every 3 months, etc.).

What temperature should a solar battery be stored in?

Avoid Extreme Temperatures And Humidity Both hot and cold temperatures can damage your solar batteries, so it's essential to store them in a relatively cool (between 59°F to 68°F (or 15°C to 20°C)) area that is not subject to extreme temperature changes.

How do you store a battery?

Moreover, since humidity is one of the biggest enemies of batteries, keep them in a dry environment, away from any direct sunlight or heat source. A cool, well-ventilated, dry area is ideal (don't store them in living areas, though). If possible, keep them in a vented enclosure or battery box to avoid any moisture from accumulating.

How to keep solar batteries warm?

The best way to keep solar batteries warm is by simply providing shelter and proper insulation. You can safely install and store LiFePO4 batteries inside your house where the temperature is controlled. This way, you don't have to get creative to provide these two basic needs (shelter and insulation).

Can A LiFePO4 battery be stored on a side?

It doesn't move around like a liquid inside the battery. For this reason, you can store and use AGM and Gel batteries on their side. Similarly, you can also mount and store a LiFePO4 battery on its side — this type of battery is not liquid-filled, so it won't leak. However, if you can avoid it, you should probably do so.
